1. **DataCo Smart Supply Chain For Big Data Analysis:** The file was easy to upload and run
2. **Synthetic Financial Datasets for Fraud Detection:** The file was easy to upload and run on my jupyter notebook.
3. **The Adult Income Dataset (UCI):** The file was easy to upload but I had to add the column names on the dataframe since there was no title for the columns in the original file. So it was a little time consuming compared to the other two files.
