Name: Sadia Watara

ID Number: 00305111

1. **DataCo Smart Supply Chain for Big Data Analysis**: The file was easy to upload and run but the file was large so I had to compress it into a zip file in order to upload on Github.

2. **Synthetic Financial Datasets for Fraud Detection**: The file was easy to upload and run on my jupyter notebook. The file was very large so I had to reduce the content of the data in order to upload it on GitHub.

3. **The Adult Income Dataset (UCI)**: The file was easy to upload but I had to add the column names on the dataframe since there was no title for the columns in the original file. So it was a little time consuming compared to the other two files.
